

release notes

settings version 1.14

orgvue settings 1.14 release notes

February 16, 2021

Introduction

Settings now provides a new experience for Paste Merging data and creating a copy of a Dataset in orgvue.

Key features

1. **Paste Merge Enhancements:** Paste Merging data in Settings will provide feedback on which Properties and Nodes have been updated, created or deleted.
2. **Save-As Performance Improvement:** You can Save-As Copy a Dataset in Settings with over 200,000 Nodes.
3. **Property Re-Ordering:** You can set the order of your Properties in Settings. Your data will export in the Property order provided from both Settings and Workspace (3.14).

1. Paste Merge Enhancements

Settings now allows you to understand the impact of your data merge on your Dataset and its Nodes before confirming, this includes:

- Updates to Properties that exist in both the uploaded file and the orgvue Dataset
- Creation of new Properties and data that exist in the uploaded file but do not exist in the orgvue Dataset
- Deletion of Properties and data (Paste Replace only), where a Property doesn't exist in the uploaded file but does exist in the Dataset

In addition, you will also be able to change the Property display name and type that will be applied during the data load.

The screenshot displays the 'Merge or replace data Real Co' interface. At the top, it shows the orgvue logo and a dropdown menu for 'Master_Settings'. Below the header, there are four steps: 'Select files', 'Edit details', 'Configure properties', and 'Summary'. The main area is titled 'Replace on Employee ID' and shows a table of properties to be merged. The table has columns for 'Imported properties', 'Property Key', 'Display Name', and 'Property Type'. The 'Employee ID' and 'Email' properties are checked for import. The 'Actual Salary', 'Employee Engagement', 'First Name', 'Ethnicity', and 'Date Of Birth' properties are not checked. A summary at the bottom indicates 16 merging, 29 total, 14 new, 2 changed, and 13 deleted. A 'Configure properties' sidebar on the right allows selecting which properties to include in the final dataset.

Imported properties	Property Key	Display Name	Property Type
<input checked="" type="checkbox"/>	Employee ID	Employee ID	Abx Text
<input checked="" type="checkbox"/>	Email	Email	Abx Text
<input type="checkbox"/>	No matching key	Actual Salary	123 Number
<input type="checkbox"/>	No matching key	Employee Engagement	123 Number
<input type="checkbox"/>	No matching key	First Name	Abx Text
<input type="checkbox"/>	No matching key	Ethnicity	Abx Text
<input type="checkbox"/>	No matching key	Date Of Birth	Date Date

Summary: Merging: 16, Total: 29, New: 14, Changed: 2, Deleted: 13

Configure properties sidebar:

- New data for existing property: Data within the property will be updated with records from the incoming file where it merges.
- New data and property: A new property is created with the data from the file.
- Deleted property (Replace only): Property that exists in the Dataset, but not in the file, will be deleted.

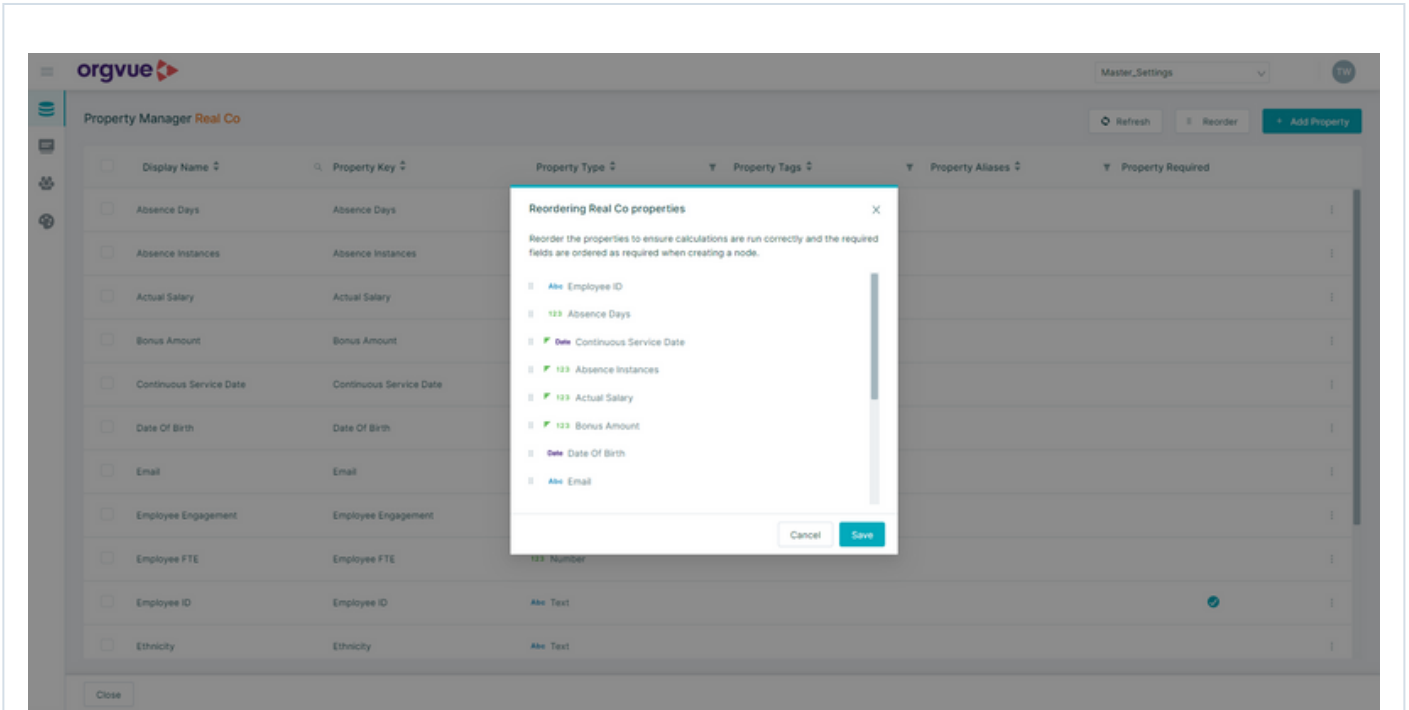

Paste Merge Data

2. Save-As Dataset Performance Improvement

You can now Save-As Datasets over 200,00 Nodes in Settings. The speed at which the copy is created has also been improved making it quicker and easier for you to create new copies of a Dataset.

3. Property Re-ordering

Property Re-ordering will allow you to set the order Properties will be downloaded. This will apply immediately to downloading data in Settings and this will be extended to Workspace 3.14 when that is released.

Property Re-ordering
